WHAT'S INCLUDED

- One-day hands-on workshop (maximum of 10 trainees)
- An online safety checklist to refer to in the short, medium and long term, incl. reminders straight to your inbox
- The option to be added to our threat database and be notified of new data breaches and online risks
- A six-month subscription to our monthly newsletter with the latest cybersecurity news

Register here

IN-DEPTH ONE-DAY TRAINING

Join our workshop and learn how to minimise the risk of cybercriminals using sensitive information about you – and those close to you – against you.

Who should attend:

If you regularly use the internet, email and social media and consider yourself digitally literate, but you're not using a password manager, you don't know how cookies work (no, you don't eat them, they eat you 😊), and you're worried that you, your parents or children might lose money in an online scam, this workshop is for you.

What you'll learn:

- How to spot online scams, including AI-generated ones
- Password and two-factor authentication best practice for preventing access to your online accounts
- How to know and what to do if your personal information has been leaked in a data breach
- How tech companies track your online activity and what you can do to safely browse the internet
- Safe and secure social media use (we look at WhatsApp too)
- What happens when I die? How to ensure your loved ones can access your online accounts should the worst happen
